EDUCATION

California State University, Fullerton

Aug. 2024 – Present

Bachelor's of Science in Computer Science (In Progress)

Pasadena City College

Aug. 2022 – May 2024

Associate's of Arts in Engineering and Technology

Associate's of Science in Natural Science

TECHNICAL SKILLS

Languages: Python, C++, SQL, Java, JavaScript, HTML, CSS

Developer Tools: Git/Github, VS Code, PyCharm, IntelliJ, Eclipse, Ubuntu, VirtualBox

Libraries: pygame, SFML, React, matplotlib, tkinter

PROJECTS

The Clothing Store | *Github* | HTML, CSS, JavaScript, Node.js, Git/Github

July 2025

- Designed system architecture through use case diagrams, class diagrams, and software requirements specifications in correspondence with SDLC, which ensured alignment on design before implementation
- Deployed a full-stack e-commerce web application using HTML, CSS, JavaScript, and Node.js to enable online purchasing, which expanded user access to the company's product inventory.
- Implemented backend functionality in a team of four to support core application features, which streamlined data processing and system reliability

Galaga Replica Game | *GitHub* | Python, pygame, Git/Github

June 2025

- Applied a Catmull-Rom spline algorithm to control twisting enemy flight paths and smoother on-screen movement
- Integrated online assets and programmed collision detection with Pygame to handle interactions and update game states, which created an engaging and responsive user experience
- Implemented asset and ship classes in Python using object-oriented programming to separate game logic across multiple files, which improved code organization and maintainability

Algorithm Projects | *GitHub* | Python, matplotlib, tkinter, pygame, Git/Github

May 2025

- Visualized algorithms with pygame, tkinter, and matplotlib to compare efficiency and runtimes
- Built a Huffman encoding/decoding tool to compress text files, demonstrating efficient use of greedy algorithms
- Developed a scheduling/navigation app to generate schedules and campus paths to optimize planning efficiency
- Collaborated on GUI design for 3 tools, each with an under one-week time constraint to improve team coordination and accelerate project delivery

ZotConnect | *Github* | Python, React, Leaflet, JavaScript, Git/Github

May 2024

- Collaborated with 2 other members to build a full-stack web application for event planning to streamline organizing and discovering events for students
- Built an interactive map with React-Leaflet to display event pins, define map bounds, and highlight specific areas
- Developed foundational Git and GitHub workflows to manage code in a collaborative environment, which enhanced version control skills and streamlined team coordination
- Researched multiple libraries and developer tools to aid development during a 2-day hackathon, enabling implementation of key features

Tetris Replica Game | *C++, SFML*

May 2022

- Recreated Tetris with SFML to apply object-oriented principles, improving modular code structure
- Structured game features with top-down design and file separation to simplify debugging and maintainability
- Programmed reusable classes for game states and interface logic, to support dynamic gameplay functionality

WORK EXPERIENCE

Shift Lead

Sept. 2021 – Present

Cold Stone Creamery

Rosemead, CA

- Delegate responsibilities across the team based on individual strengths and weaknesses to ensure tasks were completed efficiently, which increased overall productivity and team morale
- Mentor new trainees on fundamental operations and guided existing crewmembers through new procedures to address knowledge gaps, which improved task accuracy and reduced training time
- Track daily store sales and compiled detailed earnings reports to maintain financial transparency, which enabled management to make informed business and staffing decisions
